

From Strategy to Implementation.

Technology for a More Connected Future.

COMPANY OVERVIEW

Advice Backed by Operating Experience.

Turman Technology helps organizations modernize operations, deploy artificial intelligence, build digital platforms and develop the technology infrastructure required to compete in a rapidly changing world.

We combine advisory expertise with hands-on technology implementation, helping organizations move from opportunity identification through architecture, deployment and operation. We also operate our own production platforms, so our recommendations come from running real systems, not only designing them.

CORE CAPABILITIES

From Opportunity to Operations.

Artificial Intelligence

Identify where AI can create practical value, design the right architecture and integrate it into real workflows and business systems. Strategy and readiness, AI agents and automation, enterprise integration, governance.

Digital Transformation

Modernize operations, customer experiences, processes and technology platforms through practical roadmaps and implementation. Strategy, process and workflow modernization, platform modernization.

Digital Infrastructure

Design the cloud, application, data and delivery infrastructure required to support modern digital services, with monitoring, alerting, failover and recovery built in.

Media & Digital Platforms

Design, build and operate content, streaming and audience platforms for broadcasters, media organizations and telecom operators, including managed media hosting.

PLATFORM

Turman MediaCore — Your Brand. Our Infrastructure.

A white-label streaming platform for broadcasters, media groups and telecom operators, hosted, monitored and operated by Turman Technology and presented under the client's brand. It combines live-channel delivery, catch-up television, monitoring, audience capabilities and AI-assisted operations. Deployment options: Turman-managed cloud, dedicated environment, or in-country and hybrid architectures where required.

COMPANY DATA

Turman Technology, Inc.

A Wyoming corporation

INDUSTRIES SERVED

- Government & Public Sector
- Telecommunications
- Media & Broadcasting
- Enterprise

DIFFERENTIATORS

- Strategy, architecture, implementation and operation in one engagement
- Advice informed by platforms we run in production
- AI in daily operations, with human oversight built in
- Global perspective with a particular focus on Africa and emerging digital markets
- Support for anglophone and francophone markets

EXPERIENCE

Experience Built Through Implementation.

Our experience comes from designing, building and operating technology platforms in real-world environments. Named client references are provided on request where permissions allow.

Broadcast Digital Transformation

Our team has designed and operated digital television and OTT infrastructure supporting broadcasters and audiences across multiple markets: live streaming, multiscreen distribution, audience platforms, DVR, content management and monetization systems.

Streaming Platforms & Operations

Operating experience across channel delivery, subscriber workflows, monitoring, platform maintenance and customer support, the practical issues that appear after viewers begin using a service.

Digital Infrastructure

Infrastructure supporting live digital media, customer-facing platforms and connected operational systems, spanning architecture, deployment, monitoring, delivery and failover.

AI in Production Operations

AI-assisted customer service with account and billing lookup and human escalation, and AI-assisted monitoring, diagnosis and recovery support for live streaming operations.

HOW WE WORK

Strategy Is Only the Beginning.

01 Understand

Clarify objectives, constraints, users and the operating environment.

02 Architect

Define the technology, integration and implementation approach.

03 Build

Develop, configure or integrate the required systems.

04 Deploy

Move the solution into the customer's environment.

05 Operate & Scale

Monitor performance, improve the system and expand where needed.

ENGAGEMENT

Advisory and execution can be engaged separately or together: strategy and roadmaps, architecture and implementation, or ongoing managed operations. MediaCore is available as a platform service, a managed service or a dedicated enterprise deployment.

LEADERSHIP

Turman Technology's leadership background combines business, governance, technology implementation and hands-on experience building and operating digital platforms.

That experience includes early professional work in financial and technology controls, graduate-level business education, executive development in artificial intelligence and leadership, and ongoing doctoral-level business research focused on technology and organizational transformation.

FOCUS REGIONS

Global in approach, with a particular connection to Africa and emerging digital markets, where bandwidth, mobile access, payments, deployment and language shape the right design.

WORKING PRINCIPLES

- Practical, implementable recommendations
- Clear human oversight for AI systems
- Documentation and handover for client teams
